Skills

- HTML
- CSS
- Javascript
- React
- TypeScript
- Node.js
- Express
- Next.js
- MongoDB
- SQL
- Git
- Vue
- C#
- PHP

Education

Web Developer
Jensen Yrkeshögskola Malmö 2024-2026

Web Developer
Karlstad University 2023 - 2024

Experience

Fullstack Developer Intern 2025
Twentyfour

- Contributed to an integration platform connecting multiple systems through APIs, working within Docker based environments and microservices architecture in real client projects.
- Analyzed customer requirements, debugged and resolved complex system issues, implemented new features, optimized performance, and delivered tailored web solutions in close collaboration with development teams.

Software Developer Intern 2026
Dizparc

- Developed a store focused digital solution integrating web applications with hardware systems for data validation and operational monitoring.
- Building configurable business logic and validation rules to ensure reliable system behavior across different operational scenarios.
- Implementing backend functionality in C# and designing API communication between systems

About me

As a fullstack developer, I have gained hands on experience building and maintaining systems that integrate multiple services and handle complex backend logic. Through my internships, I have contributed to real client projects, worked in structured development environments, and taken responsibility for debugging, testing, improving performance, and implementing new functionality to meet project requirements.

These experiences have strengthened my ability to understand complex system flows, write maintainable code, and approach technical challenges in a structured and solution oriented way. I have also developed strong collaboration and problem solving skills, working closely with team members to plan, implement, and deliver high quality solutions. I thrive in dynamic environments where learning, teamwork, and problem solving drive meaningful results.
